

THE FULL FLOW PIPELINE UPDATE

AZUD WATER FILTERS

We have been installing AZUD auto water filters on a Waikato dairy farm which is showing positive results with Animal Health already.

Clean and reliable water gives you healthier stock, less bacteria and contaminants, better weight gain on your stock and its auto cleaning with the option to be connected via bluetooth to your phone so you can monitor it at your convenience.

A smart option giving you confidence in your water quality.

HEALTH & SAFETY

New additions to our safety gear is a new Tripod/Winch and Gas Detector.

This gives us greater flexibility on servicing valves in confined spaces without having additional contractors on site.

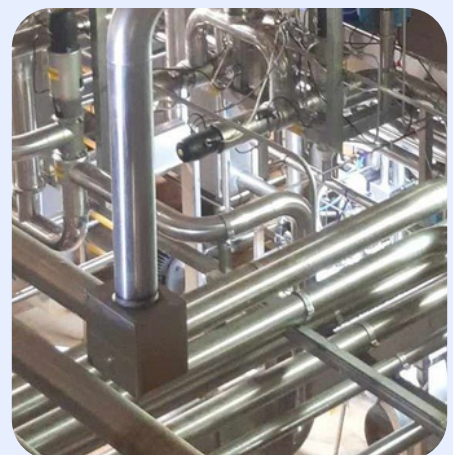

This also means no matter what time of the day or night we are ready with certified equipment.

HYGENIC VALVE SERVICING

For our team this time of the year we are in the thick of Hygienic Servicing. This year we have approximately 1300 valves to service over 8 weeks.

The team complete these with such dedication while also ensuring that our other clients remain looked after.

We are grateful to have such a dedicated team.

NEW FLEET VEHICLE

we have added a new fleet vehicle.

This is super exciting and been in the pipeline for a very long time.

The custom tray and tool storage is already proving valuable for the guys.

The crane is going to be well used and will take the strain of the team lifting the valves to compete servicing often in tight and awkward places.

Signwriting and tinting will complete the whole package.

BACKFLOW TESTING

What Is Backflow?

Backflow occurs when water flows in the reverse direction, often due to a sudden change in water pressure. This reversal can pull pollutants, chemicals, or bacteria from private plumbing systems into the main water supply — putting homes, businesses, and the wider community at risk.

Have your backflows had their 12 monthly assessment? Stay compliant and talk to us!
